Auditor loop: detect → localize → name → mitigate
Confound-agnostic core (region box, or (confound, label) pair) — serves synthetic tag, real tube, and cross-site from one implementation
Classifier
(DenseNet-121)
Detect
accuracy gap
Localize
Grad-CAM
Name
VLM (blind prompt)
Mitigate
DFR (last layer)
crops/ + manifest.json → predictions.jsonl
(isolated: no mitigation code imports this)
